

High Throughput Protein Production

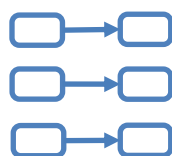

Tailored Protein Solutions

Automated multistep purification platform for
fast parallelized production of high quality proteins

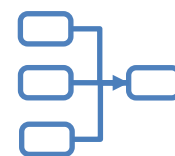

Multi-Parameter

Construct or condition
scouting:
up to 12 constructs in
parallel in medium scale

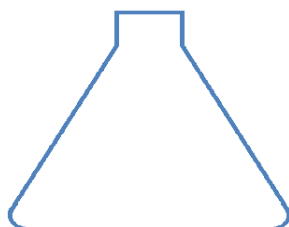

Multi-Target

Parallelized large
scale production:
up to 12 proteins in
parallel in large scale

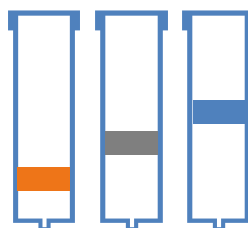

Multi-Upscale

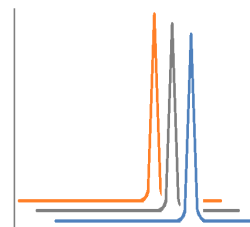

Large scale production of
challenging targets: up to
100 L expression resulting
in one protein lot

Expression in E.
coli, insect cells,
mammalian

Parallel
multistep
purification

QC: purity,
homogeneity,
identity, PTM

High Throughput Protein Production

Tailored Protein Solutions

Customized high quality protein production that meets your needs for
screening, structural biology or assays

Make use of our scientific expertise and support in:

Construct design

- Customized tagging strategy
- Individual domains, full length proteins, mutations
- Stabilization

Expression screening

- *E. coli*, insect cells or mammalian
- Intracellular or secreted
- Labelling

Protein purification

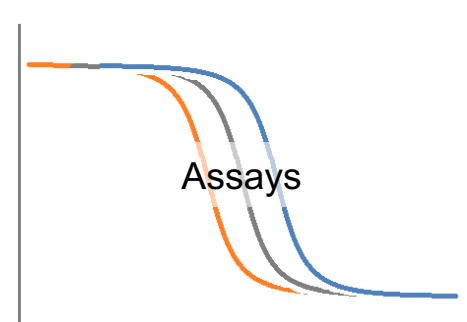

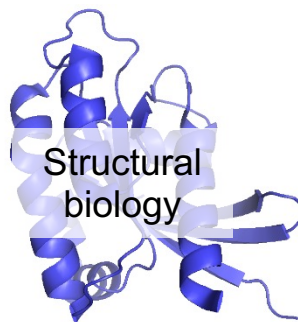

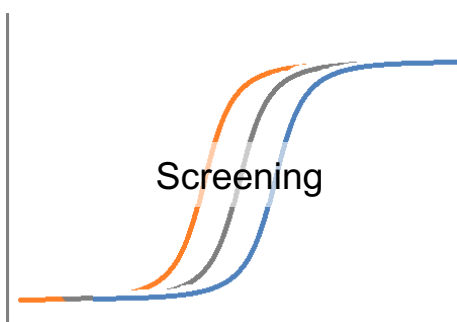

- Complexes
- Membrane proteins
- Modification

Quality control

- Mass spectrometry (intact mass, PMF)
- SEC, SEC-RALS, DLS
- Functionality testing, e.g. via nanoDSF, MST

Protein Excellence Unveiled by Assay Experts
