

In Vitro Assays

Global Drug Discovery Enabler

In Vitro Assays – Biochemical Assay Development & Application

Assay at both molecular & cellular levels

- Focus on structure-activity relationship (SAR) profiling to support lead optimization
- Potency measurement (IC_{50} , K_i)
- Compound characterization (mechanism of inhibition/MOI, including covalent inhibitors-reversibility, time-dependent inhibition/TDI, k_{inact}/K_i analysis)
- With strong experience in developing assays and servicing clients

State-of-the-art automation systems for compound delivery & assay management

Currently, 200+ assays available (TR-FRET-based activity assays mainly)

■ Assay development under appropriate conditions

- Catalytic assay at steady-state kinetics ($[E] \ll [S]$, <10% conversion)
- Binding assay at equilibrium

■ Assay development following industrial standards

- Enzyme/substrate titration
- Measurement of key constants (K_m , K_d)
- Assay condition optimization
- Assay quality assessment (S/B, Z')
- Assay validation using tool compounds
